

Extremely tight terrace glazing with a vertical framework and quality blinds that slide with the glazing.

alutec PREMIUM

Alutec Premium terrace glazing has a vertical lock that blends in seamlessly with the profile. Its embedded design does not block the sliding glass panes. The lock can be locked from the inside. It is also possible to install a cylinder body on the outside of the glazing, allowing a locked terrace to be accessed from the outside.

Enjoy your effortless and terrace life

The all-new Alutec Premium terrace glazing with a vertical framework offers an unmatched combination of elegance and practicality along with effortless privacy and shade. You will be free to focus on enjoying your Premium-level terrace regardless of the weather.

With the help of glazing and blinds, you can turn your terrace into a perfect retreat from the hustle and bustle of everyday life. Alutec Premium terrace glazing transforms your terrace into the most attractive space in your home!

While Premium glazing is very dense and sturdy, its profiles are still elegant and graceful. Glazing effectively protects the terrace from pollen, debris and rain. You will be able to enjoy your terrace safe from bugs and traffic noise. The blinds work seamlessly with the glazing, offering both privacy and protection from sunlight.

Innovative technical solutions ensure that the glazing is quiet and light to use. The glass panes and blinds slide effortlessly, making the terrace easier to use.

stylish

Forget about struggling with the blinds!
Alutec Premium makes your terrace life a breeze!

■ **High-quality blinds work seamlessly with glazing**

After the glass panes have been installed, the Premium glazing's blinds are attached with discreet fastenings to each individual glass element. The blinds slide with the glass panes, and they do not need to be moved out of the way separately when the passageway is opened.

Premium glazing has pleated blinds that can be opened from the top and the bottom. The pleated blinds come in two colour options: light grey and white.

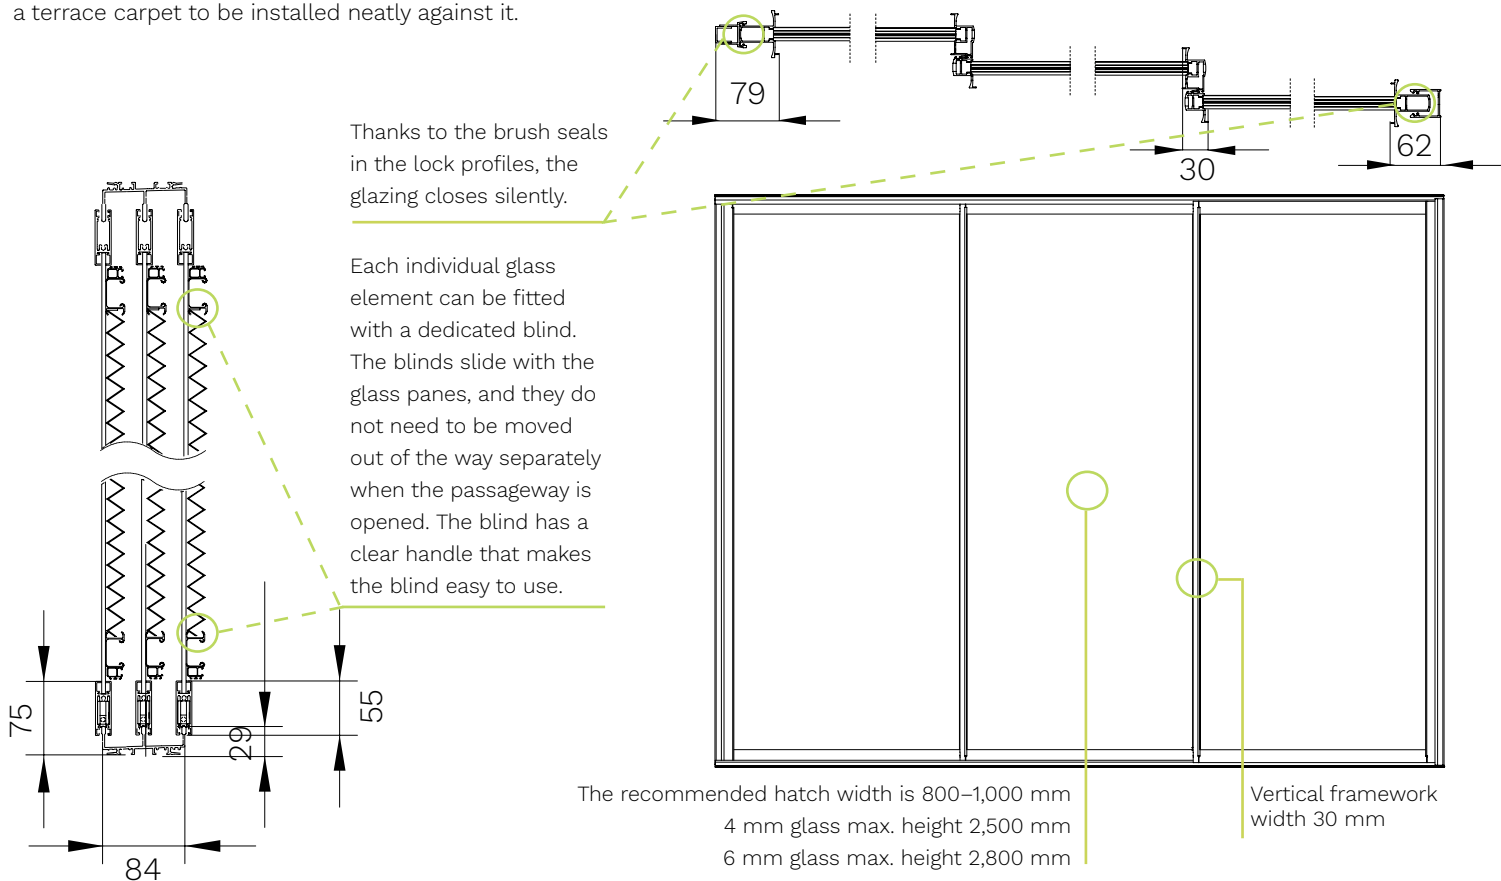

■ Glass and colour options

The bottom rail of the glazing is designed to allow a terrace carpet to be installed neatly against it.

Premium glazing uses toughened safety glass with a thickness of either 4 mm or 6 mm. When broken, toughened safety glass shatters into small, blunt-edged fragments that do not pose a serious risk of injury. Instead of clear glass, it is possible to use, for example, grey or brown glass that has been dyed in mass for the glazing. This will provide some privacy and protection from sunlight while the blinds are open.

The standard colours of the glazing's aluminium profiles are matt black, light grey, dark grey and white. The profiles can also be painted in any desired shade. The glass panes will be attached to the profiles with sealants. The sealants will be almost entirely inside the profile, which means that they are very discreet and do not widen the vertical framework. The sealant will be either dark or light grey, depending on the colour of the profile.

Aluminium and glass construction professionals

Established in 1979, Alutec Oy is a reliable family business specialising in aluminium and glass construction. Our design, product development and production teams are based in Ylivieska, in the North Ostrobothnia region of Finland.

Our happy customers are the best proof of our long experience, extensive aluminium and glass construction product range and investment in quality service. We are the solution to our customers' aluminium and glass construction requirements.
